WORK EXPERIENCE

Software Engineer

July 2024 – June 2026

Lugg

New York, NY

- Built and shipped campus moving and office moving service features end-to-end using Node.js, TypeScript, and Python, expanding Lugg's offering into new customer segments.
- Collaborated with a 4-person engineering team to launch service coverage across 8 new cities on the East Coast, including NYC, implementing load balancing across AWS infrastructure to support a 40% increase in bookings

Junior Software Engineer

Jan 2022 – Feb 2024

THACO Group

Yangon, Myanmar

- Contributed to hotel booking platform used by 15 hotels across 3 countries processing 1,200+ bookings/month; shipped frontend and backend features across Next.js/Typescript UI and Node.js services
- Built features for inventory and stock management system at Myanmar Plaza supporting real-time retail operations across multiple floors; collaborated with 4 engineering teams via GitHub pull request workflows

Software Engineering Intern

May 2021 – Dec 2021

Auston College

Yangon, Myanmar

- Selected for 8-month internship after winning Yangon city wide hackathon during high school
- Contributed full-stack features (booking, attendance tracking, CRM) to college management platform used daily by students and faculty; worked on a 7-person team under senior engineering management

EDUCATION

Bachelor in Computer Science | Honors: Dean's list

Sept 2024 – May 2026

Columbia University - School of General Studies

New York, NY

PROJECTS

Vantproof.com | Node.js, Fastify, Playwright, Claude Sonnet, PostgreSQL, BullMQ

Jun 2026

- Building a 3-agent AI security pipeline that crawls live websites via headless Chromium and uses Claude to detect vibe-coding-specific vulnerabilities (exposed API keys, missing Row-Level Security, unauthenticated routes), generating a severity-ranked report in under 2 minutes

Thadar.com | Next.js, TypeScript, Postgres, Prisma, MinIO, Docker, Tailscale

May 2026

- Architected and built a self-hosted EdTech platform for lesson delivery and progress tracking, running Postgres, S3-compatible storage, and containerized services with zero-config HTTPS via Tailscale and Cloudflare Tunnel

news.irrssue.com | Next.js, TypeScript, PM2, Cloudflare Tunnel

April 2026

- Built and self-hosted a server-rendered Hacker News reader consuming the HN Firebase API, diagnosing and resolving a Cloudflare proxy hydration issue breaking production JS delivery

Self-Hosted Cloud Infrastructure | Ubuntu Server, Docker, Cloudflare, Tailscale

April 2026

- Architected personal cloud on bare-metal Ubuntu hosting 3 production services (Nextcloud, Immich, Jellyfin) with Cloudflare Tunnel for zero-trust HTTPS; deployed Docker stack on GPU-equipped hardware for local ML interface via Ollama — github.com/irrssue/homelab

TECHNICAL SKILLS

Languages | TypeScript, JavaScript, Python, SQL, HTML/CSS, Bash

Frameworks | React, Next.js, Node.js, Express, FastAPI, Tailwind CSS

Developer Tools | Claude Code, Git, GitHub (CI/CD), Docker, Cloudflare Tunnel, Tailscale, PM2, Vite, SSH, Linux

Libraries | SQLAlchemy, Prisma, Uvicorn, ApScheduler, httpx, MapLibre GL JS, Google API, Redis/Valkey, PostgreSQL
